Information provided by FIRM is subject to review for the most current version of the State or Federal policies at the time of the award of this Contract.

By previously signing the ITB Acknowledgment and Addenda Certification Form, and this Contract, FIRM has agreed to perform in accordance with the requirements of this subsection and agrees:

- a) It is registered and uses the E-Verify system to verify work authorization status of all newly hired employees.

- k) To comply with the terms of this Employment Eligibility Verification provision is made an express condition of this Contract and COUNTY may treat a failure to comply as a material breach of this Contract.

Section 20 – Force Majeure. Neither FIRM nor COUNTY shall be considered to be in default in the performance of its obligations under this Agreement, except obligations to make payments with respect to amounts already accrued, to the extent that performance of any such obligations is prevented or delayed by any cause, existing or future, which is beyond the reasonable control and not a result of the fault or negligence of, the affected Party (a "Force Majeure Event"). If a Party is prevented or delayed in the performance of any such obligations by a Force Majeure Event, such Party shall immediately provide notice to the other Party of the circumstances preventing or delaying performance and the expected duration thereof. Such notice shall be confirmed in writing as soon as reasonably possible. All such price adjustments must be made within one year following the end of this Agreement.

Section 22 – Counterparts. Original signatures transmitted and received via facsimile or other electronic transmission of a scanned document, (e.g., PDF or similar format) are true and valid signatures for all purposes hereunder and shall bind the Parties to the same extent as that of an original signature. Any such electronic counterpart shall be of sufficient quality to be legible either electronically or when printed as hardcopy. COUNTY shall determine legibility and acceptability for public record purposes. This Agreement may be executed in one or more counterparts, each of which shall for all purposes be deemed to be an original and all of which shall constitute the same instrument.

Scope of Work

The following parties are referred to hereafter: COUNTY (Owner-Marion County, Florida), ENGINEER (Owner's Engineer - Hoyle, Tanner & Associates, Inc.), FAA (Federal Aviation Administration) and FDOT (Florida Department of Transportation - Aviation Division).

I. PROJECT DESCRIPTION & UNDERSTANDING

The work can generally be described as shown in the attached Exhibits, hereinafter called the PROJECT, and will consist of the level of effort required for the design of:

CONSTRUCT TAXIWAY ALPHA AND BRAVO (DESIGN ONLY)

Full parallel taxiways are recommended as a standard airport design element when justified through planning and they are listed in Table 3-1 of the FAA Order 5090.3C, "Field Formulation of the National Plan of Integrated Airport Systems (NPIAS)" as being considered fundamental airport development. Standardizing the airfield with parallel taxiways will provide a recognizable airfield layout to pilots. FAA research has shown that parallel taxiways directly enhance safety as well as capacity by limiting the need to back taxi on active runways and limiting direct inadvertent access onto runways for departing aircraft.

In the current airfield configuration landing and departing aircraft are required to back taxi which increases the time that aircraft are on the runway decreasing the operational efficiency of the airfield. This project will consist of design of a full-length parallel taxiway (5,000' x 35') to the primary runway 5-23 including the necessary holding bays for aircraft run-up and design of a partial-length parallel taxiway (3,291' x 35') to Runway 10-28. Analysis will be completed to determine if the run-up areas are required per FAA criteria. The project will allow aircraft to safely traverse the airfield in preparation for departure and after landing. The project will be designed to meet the current design aircraft consistent with the airport master plan.

1. Taxiway Alpha (Full Length Parallel to Runway 5-23)

Design a new full length parallel Taxiway for Runway 5-23 including connector taxiways. Design a new lighting circuit and LED Medium Intensity Taxiway Lights (MITL's). Design LED taxiway guidance and mandatory runway hold signs as required. The design will include taxiway edge and centerline striping. Grading, drainage, and turfing will also be designed, all in accordance with FAA and FDOT requirements.

2. Taxiway Bravo (Partial Length Parallel to Runway 10-28)

Design a new partial length parallel Taxiway for Runway 10-28 including connector taxiways. Design a new lighting circuit and LED Medium Intensity Taxiway Lights (MITL's). Design LED taxiway guidance and mandatory runway hold signs as required. The design will include taxiway edge and centerline striping. Grading, drainage, and turfing will also be designed, all in accordance with FAA and FDOT requirements.

RELOCATE AIRFIELD BEACON AND ELECTRICAL VAULT (DESIGN ONLY)

The existing rotating beacon is well beyond the 20-year design life expectancy. The tower is rusted and oxidized, and the beacon has been labeled as “non-visible” by pilots. The new beacon will be relocated to a new position on the airfield consistent with the airport’s overall development plan.

The 117 square foot (13’x9’) existing electrical vault has reached capacity limitations. A larger vault will house the existing (relocated) equipment and have room for the equipment that will be required based on the airport’s overall development plan. The new vault will be relocated to a new position on the airfield consistent with the airport’s overall development plan.

1. Design a new rotating beacon, with a new L-802A high-intensity rotating beacon having two 250-watt pulse-start metal halide lamps. The new installation will include new power cable in conduit, grounding/counterpoise, and photocell activation switch.
2. Design a new prefabricated electrical vault to house the sensitive and expensive electrical components necessary for controlling the airfield lighting and signage.

... all in accordance with FAA and FDOT requirements.
