

JANUS RESEARCH
SW 52nd Avenue Drainage
Supplemental for Additional Archaeological Subsurface Testing

5/30/2025

POSITION	HOURS		RATE		TOTAL
Principal Investigator	6	\$	110.00	\$	660.00
Project Archaeologist	52	\$	70.00	\$	3,640.00
Field Archaeologist	40	\$	42.00	\$	1,680.00
Clerical	1	\$	45.00	\$	45.00
Total Direct Labor				\$	6,025.00

DIRECT EXPENSES

Project Supplies	12.00	
Per Diem	460.00	\$46/day (2 people x 5 days)
Lodging	1,600.00	\$ 200/night (2 people x 4 night)
Mileage & Travel	169.00	260 miles @ \$0.65/mile
Total Direct Expenses	\$ 2,241.00	

TOTAL LABOR & EXPENSES

\$ 8,266.00

Assumptions

This cost estimate is supplemental to the initial estimate due to the increased archaeological potential of the project area and the identification of archaeological material.

Additional subsurface testing (maximum of 40 shovel tests) will be excavated in areas of increased archaeological potential, to determine the extent of the archaeological site(s) and make a preliminary assessment of significance.

Also included are additional hours for artifact analysis.

The results of this testing will be incorporated into the CRAS report.

Costs for additional research or excavations deemed necessary to evaluate National Register of Historic Places (National Register) eligibility, Section 106 Determination of Effects for National Register-eligible resources, Section 106 consultation, or the development of a Memorandum of Agreement (MOA) are not included in this scope and will be negotiated later, if required.

**PROPOSAL FOR ADDITIONAL ARCHAEOLOGICAL TESTING FOR THE
SW 52nd STREET DRAINAGE IMPROVEMENT PROJECT,
MARION COUNTY, FLORIDA**

May 30, 2025

Janus Research is respectfully requesting supplemental funds for additional subsurface testing of the SW 52nd Avenue project area. Preliminary background research suggested the project area had a low potential for archaeological sites and a maximum of 20 subsurface tests were proposed. To date, a total of 36 subsurface tests have been excavated. The testing identified areas of increased archaeological potential and archaeological material in 15 shovel tests. Additional testing is required per the Archaeological Research Design approved by FEMA and to meet the standards included in the Florida Division of Historical Resources' (FDHR) Module 3: Guidelines for Use by Historic Preservation Professionals (2003:14-20).

Additional subsurface testing will be conducted in areas of increased site potential, to determine the extent of the archaeological site(s) and make a preliminary assessment of significance. The results of this additional testing will be incorporated into the Cultural Resources Assessment Survey report.
